

Userneeds searches for a Full Stack Developer

Are you interested in being in part of an agile development team working directly with our stakeholders? Do you have a strong interest in development using modern frameworks? Then we are very interested in hearing from you.

About Userneeds

Userneeds currently consists of more than 60 colleagues with various educational backgrounds and nationalities. At Userneeds, ideas and actions are not far apart and that combined with our unique social community and flat structure make the company a special place to work. Our main office is in the heart of Copenhagen, but we also have a smaller office in Stockholm and Finland where the same core values are present.

As an employee at Userneeds you not only get the opportunity to work with your creative and technical skills you also get a chance to show your personality and develop your own role in close collaboration with your manager and colleagues. Finally, it is worth mentioning that we appreciate an informal tone and a healthy work environment where the well-being of the employees and social events are highly valued.

The position

At Userneeds we strive to provide our clients with valuable insights and data. We are currently working on creating new data-intense products. At the moment we are adding more systems both internally developed as well as external systems as well as integrations between these.

This new position in the Development team will have a direct reference to the CTO as it will focus on strategically important projects.

Responsibilities

- Developing new solutions
- Developing integrations using APIs between different systems
- Developing APIs that we may expose to partners
- Following a solution in the full life cycle from idea to roadmap, development, launch and maintenance
- Being part of implementation of good development practices and methods

Your qualifications

- Relevant education within IT
- 3+ years of experience as full stack developer (focus on PHP)
- Knowledge of backend development
- Knowledge of frontend JS frameworks
- Knowledge of SQL databases
- Knowledge of cloud infrastructure
- Experience with agile working practices

Application and resume

Please address your application and resumé to Ulrik Hjarnaa, CTO. The hiring process will consist of two interviews followed by an evaluation.

The team

You will be part of the IT department which consists of developers, consultants and system administration. We are a small team and cross functional, we work with large international providers on the software platforms and provide these as well as internally developed solutions to Userneeds.
