

# Userneeds is looking for a Backend- and DevOps engineer

**Do you want to join a strong team of developers and IT employees working on cloud native solutions, large volumes of data and state-of-the-art technologies?**

## About Userneeds

Userneeds currently consists of more than 50 colleagues with various educational backgrounds and nationalities. At Userneeds, ideas and actions go hand in hand and that combined with our unique social community and flat structure makes the company a special place to work. Our HQ is in the heart of Copenhagen while we also have offices in Stockholm and Helsinki where the same values are present.

## The position

Userneeds wants to strengthen the IT department even further. If you are our new developer you will help grow the product portfolio and strengthen our capacity and pace of development.

You will be part of our agile dev team of 5 engineers within the IT department working from the HQ in central Copenhagen building internal as well as external solutions with focus on automation and the ongoing optimization of Userneeds' many processes and products.

Our team is innovative, solution-oriented, multi-cultural and communication is primarily in English. We anticipate you thrive in such an environment.

## Responsibilities

- Handle CI/CD, maintain and optimize deployment pipelines
- Cloud infrastructure administration

- Developer Experience (Dev-X) initiatives and solutions
- Develop products and tasks as described in the company pipeline
- Follow a product through its full lifecycle including ideation, roadmap, architecture, infrastructure, development, QA, documentation, deployment and maintenance
- Create and maintain API integrations with external partners
- DataOps: Ensure large volumes of data are stored correctly and operable

## Your qualifications

- Relevant mid to long IT education e.g. IT engineer or computer science
- 3+ years of experience as full stack developer
- Deep knowledge of modern web technologies and practices
- Experience with cloud infrastructure, CI/CD, Gitlab, Kubernetes
- Experience with PHP including frameworks such as Laravel
- Experience working in an agile environment

**Application and resume**
